

## Choose a folder you want to share with the VM

- 1: Right Click your VM
- 2: Choose “Setting”
- 3: Click “Option”
- 4: Click “Shared Folders:”
- 5: Click “Add”
- 6: Select your folder from your PC

## Install the VMware Tools

Run the following commands in the terminal to ensure that VMware Tools is correctly installed

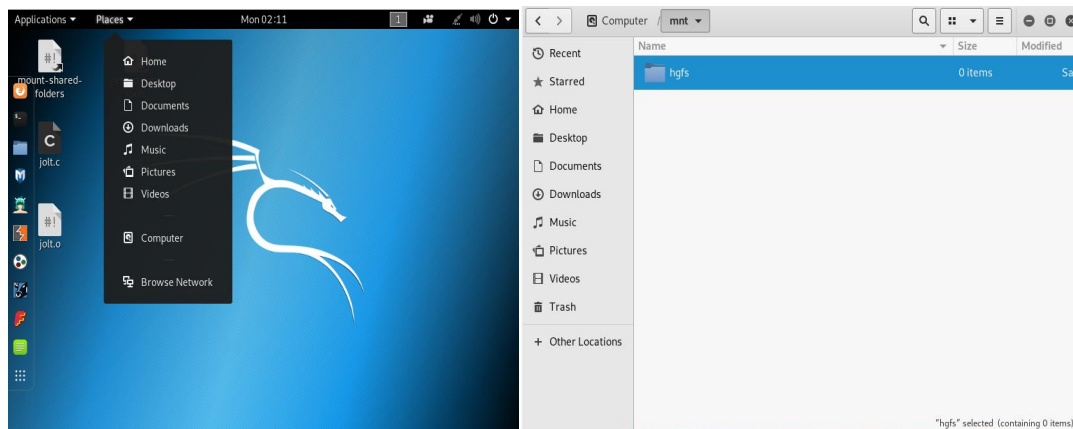

```
sudo apt update
sudo apt install open-vm-tools-desktop fuse
```

## Setting up a shared folder between your virtual machine and host

Run the following commands in the terminal

```
sudo mkdir -p /mnt/hgfs
sudo vmhgfs-fuse .host:/ /mnt/hgfs/ -o allow_other (Remind the “space”)
```

## Open the shared folder created on the VM

- 1: Click “Places” and then click “Computer”
- 2: Scroll Down and find the folder: “mnt”
- 3: Click the hgfs folder
- 4: You will see the shared folder you created
