# 3 Areas of Cyber Security

## People

End user's  
behaviours when  
using technology

## Process

Processes that  
governs secure  
use of technology

## Technology

Technology that  
secures ...  
technology

# How to get a job in Cyber Security

1. Actively give your area of interest a go, and then over-document it on your CV, blogpost, LinkedIn. There are LOTS of free **CTFs** available. Tangible demonstration of experience (even not professional) will guarantee you an interview
2. Speak to as many people from the industry as possible (I'm happy to chat too). Networking brings you a long way in your career, not just to get a job but to continue progressing even after having a job. Attend **meetups**.
3. Million dollar question: What **certifications** should I get? If you're not doing the first and second point above, start with those first. But leverage all the free and discounted certifications you see popping up in class. There should be a few Microsoft ones that will cost thousands once you stop being a student.
